

ABSTRACT OF THE DISCLOSURE

A system and method of furnishing illegal mobile equipment user information in a network environment includes obtaining and managing illegal mobile equipment user information through a MAP protocol to thereby prevent a mobile subscriber from illegally using mobile equipment, and tracing illegal mobile equipment through useful information such as user of illegal mobile equipment and a time of use of the illegal mobile equipment. Through this system and method, a mobile communication carrier may flexibly deal with illegal mobile equipment so that competitiveness of goods is heightened and high quality service may be furnished. Furthermore, an EIR that detected illegal mobile equipment usage may transmit illegal mobile equipment user information to Customer Service Billing System, so that immediacy of information may be assured, operator tasks may be reduced, and information may be effectively managed by centralized CSBS.
